Four Seasons Replacement Top

The four seasons top comes equipped with two mesh covered window cut-outs, providing ultimate flexibility. The four seasons is built to last. Unzip the windows to provide sunlight under the canopy or to allow wind to pass through. When the sun is too bright or rain is in the forecast, the windows can be zipped shut providing a barrier between you and the elements.

600D Polyester Fabric

10′ ×10′	~~$259.99~~	$139.99
10′ ×15′	~~$359.99~~	$219.99
10′ ×20′	~~$439.99~~	$309.99

Flame Retardant Fabric

10′ ×10′	~~$279.99~~	$159.99
10′ ×15′	~~$389.99~~	$249.99
10′ ×20′	~~$479.99~~	$369.99

Sandwich Mesh Replacement Top

Sandwich Mesh Replacement Top – Our sandwich top is made up of multi-layered mesh fabric. It is lightweight and allows air flow while still providing adequate shade. The Sandwich top is the perfect top for areas with wind gusts as it allows the air to pass through the top without bringing down the canopy.

10’x10’= ~~$169.99~~ $119.99

Economy Replacement Top

These Tops come with straight edges.
The Economy Replacement Top is made with 420 denier polyester fabric and comes in five vibrant colors (Royal blue, Green, Red, Light yellow, and white).

10’x10’= ~~$119.99~~ $89.99

HEAT INSULATION

Heat Insulation - California Palms heat insulation is an extra barrier between you and the relentless heat of the sun. The heat insulation attaches under the canopy top allowing for an "attic" effect giving you added comfort on those hot summer days

10′ x 10′ $49.99
10′ x 15′ $79.99
10′ x 20′ $99.99

Canopy Side Walls

Standard side walls come in a set of four (4) panels that zip and velcro together to completely enclose a canopy. Standard side wall sets contain one panel with a center zipper opening, and 3 solid pieces. Custom Side Walls are available with optional window panels and double sided zipper doors

MULCH FILM

Material:LDPE+LLDPE,maxium width: 2m

Thickness	width	length
1.2mil	30in	2000ft
1.2mil	36in	2000ft
1.2mil	42in	2000ft

Thickness	width	length
1.2mil	52in	2000ft
1.2mil	64in	2000ft
1.2mil	84in	2000ft

Transparent Mulch Sheet

Transparent Mulch Sheet's Sun shade rate and thermal radiation is up 90%. It's widely used on keeping and increasing temperature.

Silver Mulch sheet

Autumn covering used to drive the aphid gas moisture, and weeding effect. Silver film transmittance of 15% reflective rate higher than 35%, reflecting with infrared, the aphid has repellent effect. While the aphid is virus main communication, media, insect can play a role of anti virus. The low transmittance of weeds, inhibitory effect.

Black Mulch Sheet

The summer high temperature for weeding cooling can also be used for the cultivation of some softening of the vegetable crops. Black film transmittance is only 1% to 3%, the thermal radiation only 30% to 40%. Since it is almost opaque, weeds will not germinate and photosynthesis, thus weeding effect is significant. Black film in the sunlight itself, warming fast, high humidity, but passed to the soil less heat, so the warming effect is not as good as transparent membrane, the summer daytime cooling effect.

Green Mulch Sheet

The natural light is selectively, can inhibit the weed chlorophyll formation. Green plastic film heat radiation transmittance significantly worse than the opal film, but the film is significantly higher than the black. Therefore, the green film role is mainly supplemented by weeding, warming, can replace the black film for spring weed.

Black/white Mulch sheet, Silver/Black Mulch Sheet

High temperature in summer cooling weeding effect than the black film better. Black and white on both sides of film side white, the other side is black, white side facing up when coated, black paste to flour to increase light reflection, black-face block sunlight transmission, and thus the cooling effect during the day is better than the black film. It is mainly used for summer high temperature cooling weeding.
Silver and black plastic film surface silver reflective function to get rid of aphids, the inside of the black film can suppress weeds, cheaper than the expensive foil a considerable effect. While to prevent evaporation, when the summer temperatures can play a role in moisturizing

Blue Mulch Sheet

Has a strong heat absorption function and more than ordinary plastic film to raise the temperature 5 degrees or more. It can also be used to suppress weeds

Product Performance

This product has the physical/chemical properties of polyethylene, excellent controllability of degradation rate, and complete degradation at last. It meets both the low-cost economic performance and five application performances of qualified degradable mulching film:

- *Controlled degradation rate*

Its degradation period is designed according to the different climate/soil environment and different heat/moisture preservation requirements in different areas, e.g. 30 days, 60 days, 90 days and 1 year;

- *Same quality level as polyolefine polymer plastics of same use*
- *Balanced lipophilicity and hydrophilicity*
- *Complete degradation at last*
- *No pollution*
- *Low cost affordable for farmers*

Overall Benefit

This product can effectively solve the problems of normal crop cultivation and environment/cropland in massive mulching film residues, upgrade the technological level of agricultural production materials, increase the economic benefit of agriculture, expand the cropland area of mulching film, and improve the total yield of crop.

- *Protect cropland quality*
- *No recovery or treatment*
- *Promote crop photosynthesis*
- *Improve the activity of soil microorganism*

CUCUMBER NET

Size:1.83 x 50M Mesh size:9”X9” diamond 100% HDPE

- High Strength Net Better Vine Growth Better Fruit Support 10~14-month duty cycle.
- The best net you can find anywhere in the US. Made 2-times stronger than other nets w/twice the number of strands per yarn closer mesh size to support more vine growth and more fruit growth.
- Useable for more than 1 crop without changing, to save money/set-up time & labor.
